

Circular Cubic Pythagorean Fuzzy Neural Network

INPUT LAYER

Step 1:

Collect the expert assessments in the form of CCuPFNs

Step 2:

Combine the individual decision matrices to formulate the collective decision matrix

HIDDEN LAYER

Step 1:

Calculate the hidden layer criterion weights

Step 2:

Aggregate the collective decision matrix by applying the proposed aggregation operators

OUTPUT LAYER

Step 1:

Criterion-wise Distance Measures

Step 2:

Computing score values for each known class

FINAL RESULT

Ranked alternatives based on the score values obtained from the proposed methodology.
